

# SOFTTSING LTD

---

## CLIENT

---

Name: SAVVAS CHRISTOU

Company: LEXI BOOKSHOP

Size: LOCAL BUSSINESS

Address: EVAGORA PALIKARIDI 5, LAKATAMIA 2540

Telephone Number: 22624178

Our client was found by us (THE SOFTTSING COMPANY), through people we know and were stopping by that shop, buying/renting/printing books etc... BUT our client uses a python script-based clientele consisting of:

1. The actual customers (Name, Surname, Phone, Address)
2. What each customer has requested (Purchase, Copy a book)

---

## SOFTWARE PROJECT

---

For the reason stated above, as a high intelligent company, we decided to help our client by making him a new UI Software-based clientele. After a respectively long meeting with him (took place on February 15th), we finally came to an agreement and accepted our help. This is then how "ClientTsingDel (CTD)" was born. It is the perfect solution for our client, this is literally the rage right now!

With this new software-based clientele (and based on client's requirements), our client can easily keep track of his customers. For instance,

1. A new customer can be added / Removed at any time
  2. Can track what each customer bought or requested for copy (book)
  3. In case of offers, the system will automatically send messages / email to the whole client list
  4. Finally, it will be a proper UI system with buttons and all sort of fun and nerdy bits
- OF COURSE, DATABASE OF CLIENTS WILL BE PROVIDED IN ORDER TO ACHIEVE THIS MASTERPIECE

---

## USEFUL FOR EVERYONE

---

This kind of software can be found handy to not only our client but also to almost every other book shop, especially those that also sell painting materials like, brushes, canvases, Graphite pencils, Painting palette, Masking tape etc...

Nevertheless, can be useful for the ordering of books that are currently not available in the shop...

So, based on the aforementioned, this software is a convenience tool that will not only save time but also will relieve the client from heavy stress, since the majority of it will be done automatically by the system itself, with little interaction from the user, whatsoever.

---

## OTHER COMMENTS

---

As a team we will form a new kind of service, which is **renting**. According to the client needs and his customers satisfaction, this new feature will come at an ease for both client and customers.

To distinguish the purchase from renting, is that we will form a section A for the books being bought by the customer and a section B which relates to the books rented.

As for the prices, is constant to an X value for X months based on availability.

**BUT MORE DETAILS WILL BE PROVIDED AS WE PROGRESS WITH THE PROJECT AND FUTURE MEETINGS WITH OUR CLIENT.**

---

## THANK YOU

---
