CLIENT'S FEEDBACK

On Tuesday (19/04/2022) we finished a prototype including the UI forms along with the connection of the database through small coding, to just be able to run, so client can see an overall of what is going on. From then on, the following day we arranged a meeting with the client (20/04/2022), to show him and therefore sent him the prototype for a deeper look. Initial reaction was good as client was excited and thrilled by what we have done. Though, he told us to give him a couple of days to check it in more depth and will get back to us as soon as possible with feedback. Few days passed and client provided us the feedback. He told us everything was as firstly discussed, during our first ever meeting, BUT there was something missing regarding the LOG IN and LOG OUT info.

WAY SOLVED

To solve LOG IN / OUT was:

- In our database, we created through SQL commands, a log in and log out table which takes variables date/time
- Then we fixed the UI form responsible for that table and updated it so it can include both new columns
- Finally, everything was connected through coding shown in deliverable F OR through the provided GitHub link, shown above

There was nothing else because as stated previously, client himself told us that all things implemented and included were as talked during the first meeting, therefore due to our constant communication with him, we were able to "listen" and follow his needs.

CLIENT'S FEEDBACK

THANK YOU
